

## PRODUCT UPDATE April 2020

---

### Shock Relocation Option

Cottrell Announces Sleeper Truck Shock Relocation for the 58" bunk Peterbilt sleeper cab. This modification allows the driver an extra 3" behind the cab for increased payload and better door openings. Shocks, air bags, and mounts are relocated under the cab allowing extra space but will not affect the smoothness of chassis ride. Please note that trucks need to be ordered with specific options.

Please contact Cottrell or your nearest dealer to learn more about shock relocation for your truck.
